Definition of Sustainable Development

Sustainable Development is the process of meeting the needs of the present generation while protecting the resources, environment, and opportunities that future generations need to meet their own needs.

1. Simple meaning

To live, develop, and create value today without destroying the ability of future generations to live and develop tomorrow.

2. Three pillars of sustainable development

1. Environmental Sustainability

Protect nature, water, land, air, forests, and natural resources.

2. Social Sustainability

Improve people's quality of life, education, health, equality, safety, and opportunities.

3. Economic Sustainability

Build a stable economy, create jobs, manage resources efficiently, and support long-term prosperity.

3. Sustainable Development Formula

Sustainable Development

People + Planet + Prosperity

Present Needs + Responsible Resource Use + Future Generations

4. Practical business example

A construction materials company can apply sustainable development by:

- **Economic:** Earn profits and maintain long-term business growth.
- **Social:** Provide safe working conditions and fair treatment for employees.

- **Environmental:** Reduce material waste, recycle resources, and use energy efficiently.
- **Future generations:** Preserve resources and build a business that can continue creating value over time.

5. Key professional terms

Term	Definition
Sustainability	The ability to maintain something over the long term
Sustainable Development	Development that meets present needs without compromising future generations
Resource Management	Using resources efficiently and responsibly
Intergenerational Equity	Fairness between present and future generations
Long-term Development	Progress designed to remain beneficial over time
Environmental Protection	Preventing or reducing harm to the natural environment

Recommended core principle for your learning model:

“Create value for the present, protect resources for the future, and ensure that development benefits people, society, and the planet over time.”
